Weekly Dropbox Question Assignment

Dropbox will open from Mondays ~5pm and close by Friday ~5pm.

In this weekly assignment, I am going to ask that you post questions/topics from the last three lectures (i.e. for discussion on Monday 11/19/12, post questions from lectures on 11/12, 11/14, 11/16) that you would like to go over in discussion. You can post all of your questions on one day (Friday) or post multiple times throughout the week. This is completely optional, and merely meant as a tool for you to communicate to me things that are confusing that are not getting covered.

Please be as specific as possible.

Example of a bad question:

“I don’t understand mitosis, can we go over that?” This question is vague, and I cannot possibly go over mitosis in its entirety within our time constraints.

Example of a good question:

“I don’t understand what the difference between metaphase in mitosis is versus meiosis, could we go over that?”

You may even post things in there like, “On slide X, why is the top strand considered the template strand and not the bottom strand?” or questions you come up with yourself that are based off of test questions.
